ADASSESSOR FOR CONTINUOUS VISIBILITY TO ACTIVE DIRECTORY EXPOSURES & LIVE ATTACKS

FREE ASSESSMENT

Microsoft Active Directory (AD) is a primary source of information for all enterprise resources and seamlessly integrates business applications, which makes it a high-value target for attackers. However, securing AD is difficult since many exposures are not apparent unless an organization performs an exhaustive and expensive audit.

ATTIVO ADASSESSOR – CONTINUOUS EXPOSURE AND LIVE ATTACK VISIBILITY

- Provides visibility into critical domain, computer and user-level exposures for quick remediation

- Automatically monitors AD for activities that signify a possible attack - continuously or on-demand

- Analyzes changes for potential risk and provides risk score

- Identifies new exposures that indicate possible malicious activity
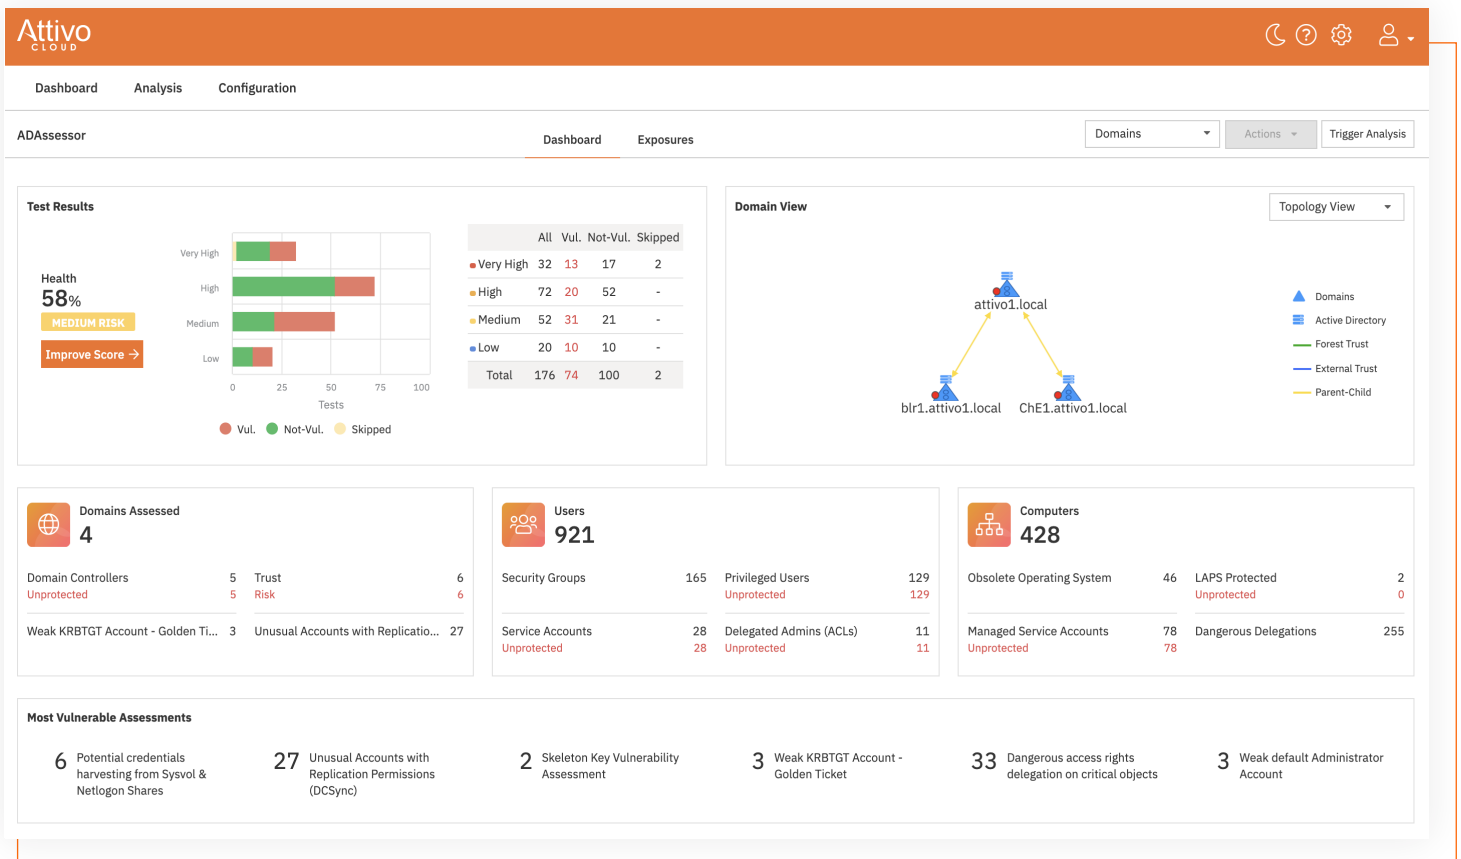

ADAssessor Dashboard

BENEFITS

- Visibility to AD security hygiene issues and actionable alerting for key exposures at the domain, computer, and identity levels

- Real-time AD privilege escalation detection and granular access restrictions to AD information without impacting business operations

- Continuous insight into Identity and Service account risk related to credentials, privileged accounts, stale accounts, shared credentials, and identity attack paths

Domain level Exposures	User level Exposures	Device level Exposures
• **Weak policies** • **Credential harvesting** • **Kerberos vulnerabilities**	• **Account & privilege issues** • **Service account exposures** • **Privileged account exposures**	• **Rogue domain controllers** • **Operating System issues** • **AD-related vulnerabilities**

200+ Exposures and 70+ Vulnerabilities Detectable

IMPLEMENTATION

- Easy: lightweight library runs from a single endpoint without requiring privileged credentials

- Flexible: management and console in public cloud or on-premise

- Automated: subscribes to change notifications at the Domain controller to detect attacks in real time

ABOUT ATTIVO NETWORKS®

Attivo Networks®, the leader in preventing identity privilege escalation and detecting lateral movement attacks, delivers a superior defense for countering threat activity. ThreatDefend® Platform customers gain unprecedented visibility to risks, attack surface reduction, and speed up attack detection. Patented innovative defenses cover critical points of attack, including at endpoints, in Active Directory (AD), in the cloud, and across the entire network. Concealment technology hides critical AD objects, data, and credentials. Bait and misdirection efficiently steer attackers away from production assets, and deception decoys derail lateral movement activities. Attivo has won over 150 awards for its technology innovation and leadership. www.attivonetworks.com
